## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-137 are rejected under 35 U.S.C. 102(e) as being anticipated by Wong et al.

Figure 2 of Wong et al discloses the concept of launching a first wavelength signal ( $\lambda_1$ ) at a first power and a second wavelength ( $\lambda_2$ ) at a second power into a Raman gain fiber (16). The noise figure of communication signals amplified by the fiber is improved (see abstract). This structure teaches the concept set forth by claims 1-137. As a result, it is requested that applicant point out the specific limitations of claims 1-137 that best define over Wong et al in order to avoid confusion over what is patentable subject matter in view of the large number of claims presented.

Any inquiry concerning this communication should be directed to Mark Hellner at telephone number 703 306 4155.
